Categories: Yellow Category

Thanks Steve/Leise

Can you please check if our previous response regarding hydroxyapatite is on the website/publically available anywhere - and how we intend to manage the change in opinion re approval etc.

As there is now no compliance issue with the presence of hydroxyapatite there is no reason to inform the jurisdictions through Amanda's network.

Regards
Trevor

Subject: FW: Draft Nano in IF SE brief for comment/clearance [SEC=UNOFFICIAL]

Dear Trevor

Just a heads up that **two SE** nano briefs are on their way to you for clearance. I understand that Glen has instructed that the IF nano one be a separate brief, to follow the broader nano one.

Regarding the regulatory status of Hydroxyapatite in infant formula, it has been confirmed that it is approved for use and listed as 'Calcium Phosphate Tribasic' in the Code. Previously the uncertainty of the advice has arisen because of the use of non-IUPAC chemical names.

Regarding the SNAG, we are proposing to consult members by teleconference. This has not yet been mentioned in the SE brief.

Thanking you.

Kind regards
Steve C.

Dear Gillian

I clear this brief with a request that the status of use of hydroxyapatite in the Australia/New Zealand is more explicit. I have made a change accordingly. As I understand it, Glen has instructed that this should be attached to the broader nanotechnology brief rather than being incorporated within it.

Thanking you.
Kind regards
Steve C.

Hi All

A draft senate estimates briefing on nano particles in Australian IF is ready for your comment/clearance. Link below

<http://fsintranet/IWG/parl/Documents/Senate%20Estimates/2017/May%202017/3.1.2%20A%20Nanoparticles%20in%20infant%20formula.docx>

Thank you
Gill
